Job Offer

JavaScript Software development (f/m/d) – Warsaw (Poland)

ZEDAS is a successful, international and growing software company with 80 employees at its headquarters in Senftenberg and Dresden (Germany). Since company foundation more than 25 years ago ZEDAS established itself Germany- and Europe-wide as one of the leading provider for software solutions for the management of rail freight. In order to expand our international activities, we would like to further expand our team.

■ Your responsibilities

You will strengthen our development team in the maintenance and further development of the existing software modules of our standard products. You will work independently in all areas of software development: from analysis and specification to development and testing. There are always new technological challenges and diverse tasks.

■ Your profile

- a level of education which corresponds to completed university studies or appropriate professional experience of several years' duration
- good/very good knowledge of object-oriented programming and software design
- Experience with established GUI technologies in the JavaScript environment
- Basic knowledge of the Framework Angular or analog technologies (e.g. React)
- Basic knowledge in testing software, especially in the JavaScript environment
- Team spirit and willingness to take responsibility

■ Our Offer

You can expect a performance-oriented, modern corporate culture; a varied job in an international business environment; internal and external training; a motivated team; flat hierarchies and a pleasant working environment with flexible working hours and the opportunity to work remotely.

Do you feel addressed? Then we look forward to your application by email (please as PDF document only) indicating how you have become aware of us.
