Company profile

■ Our company

ZEDAS GmbH develops software products for the logistics management of rail transport and for the asset management of vehicle fleets and technical asset management.

» Our services

The introduction and implementation of software developed in-house are our key services.

Our services include:

- Project management and consultancy over the course of the entire project
- Design and installation of the required communication solution
- Staff training
- Support and maintenance for our products

» Our expertise

Our customers have experienced consultants at their disposal, who contribute superb expertise to the entire project implementation. We support business customers worldwide with over 20 years experience, more than 70 staff members at the Senftenberg location and a specialised, effective network.

» Our products

■ **zedas[®]cargo** is a logistics solution for national and international rail freight transport. Using zedas[®]cargo you manage, control, monitor and document all freight transports: from signing of contract, through to implementation and control to invoicing. This guarantees you the reliable and efficient processing of transport orders. A sophisticated regulatory framework, definable workflows with plausibility checks and configuration options are available to you.

■ **zedas[®]asset** is our standard software for maintenance and technical asset management. The solution optimises the operation of industrial systems, infrastructure networks and vehicle fleets: it increases availability and reduces operating costs. Using zedas[®]asset, you monitor the condition of machinery and systems, control the efficient use of maintenance resources and predict asset behaviour. The solution supports your continuous improvement process and investment decisions.

Our solutions are complemented by mobile product applications - covering the full range of support for mobile processes.
